### **CONATHANE® CE-1155**

#### **Product Description**

CONATHANE<sup>®</sup> CE-1155 is a two-component, transparent, fast-curing polyurethane conformal coating MIL-I-46058C.

#### **Areas of Application**

CONATHANE<sup>®</sup> CE-1155 provides an excellent electrical and moisture barrier for thin film applications on components and printed circuit boards.

#### **Features and Benefits**

- QPL listed for MIL-I-46058C for Type UR
- Excellent hydrolytic stability
- UL94 V-0
- Flexible coating
- Excellent adhesion to phenolic and epoxy-glass laminates, even in harsh environments
- Fluorescent under UV lighting

#### Application Methods

- Spray Coating
- Dip Coating
- Brush Applied

#### **Transportation / Storage**

Store at  $20 - 30^{\circ}$ C /  $68 - 85^{\circ}$ F in a dry controlled environment out of direct sunlight. This material should be suitable for use stored under these conditions in the original sealed containers for twelve (12) months from the date of shipment.

Failure to store the CONATHANE<sup>®</sup> CE-1155 products as recommended above may lead to deterioration in product performance.

This product is sensitive to moisture and atmospheric humidity. Containers, once opened, should be used immediately or blanketed with dry air or nitrogen (CONAP<sup>®</sup> Dri-Purge) before resealing.

#### Health / Safety

CAUTION: Material is flammable. Do NOT use in the presence of open flames or sparks.

Refer to the Safety Data Sheet for additional information.

#### **Typical Properties of Material as Supplied**

## **CONATHANE® CE-1155**

#### **Typical Properties of Mixed Materials**

| Property | Conditions          | Value | Units |
|----------|---------------------|-------|-------|
| Pot Life | 400 g @ 25°C / 77°F | 6     | hours |

#### **Regulatory Information**

| Property                 | Test Method  | Value | Units           |  |
|--------------------------|--|-------|-----------------|--|
| Volatile Organic Content | ASTM D3960 3.2 pound   |       | pounds / gallon |  |
| RoHS Compliance          | CONATHANE <sup>®</sup> CE-1155 Urethane Prepolymer and CONATHANE <sup>®</sup> CE-<br>1155 Curative comply with Directive 2011/65/EU of the European Parliament<br>and of the Council of 8 June 2011 (RoHS 2.0) as amended 31 March 2015. |       |                 |  |

### **Application / Curing Schedule**

Performance of the CE-1155 cured film is dependent on process controls used in application of the coating. Cleanliness of the substrate is a major factor in promoting adhesion and preventing under-film corrosion. Assemblies must be clean, oil-free, and dry. For specific recommendations, please request the C-115 Technical Bulletin.

CE-1155 can be applied by spraying, dipping, or brushing. If viscosity reduction is desired, dilutions of 10 - 20% by weight with the CONAP<sup>®</sup> S-8 Solvent are recommended for most applications. For some spray applications, dilutions up to 1:1 by volume may be required to avoid cobwebbing.

A minimum of two coats of CE-1155 is recommended for optimal protection. A total cured film thickness of  $2 \pm 1$  mils is recommended. CE-1155 may be recoated after the previous film is tack-free.

Curing of the film is dependent upon the evaporation of the solvents and subsequent reaction of the polymer. Use the following estimates for tack-free and cure times:

| Temperature   | Tack-free Time  | Cure Time  |
|---------------|-----------------|------------|
| 25°C (77°F)   | 5 – 6 hours     | 5 – 7 days |
| 60°C (140°F)  | 30 – 45 minutes | 3 hours    |
| 100°C (212°F) | 10 – 15 minutes | 1 hour     |

The cure schedules above are based on time after the unit reaches the specified temperature and are recommendations only. The user is responsible for determining the optimum cure conditions for his application.
