

Slurry Solve

Remove Caked-On Debris From Equipment

Want to keep your CNC routers, bridge saws and other equipment in tip-top shape? Removing dried slurry from your equipment can be very difficult and time consuming.

With Slurry Solve, you now get the power of a strong acid without any of the hazards. This amazing cleaner utilizes state of the art surfactant technology and a small molecular size to penetrate deep inside the pores of residual natural and engineered stone to react within. It is this unique formulation that makes it ideal for cleaning and maintaining.

- **Bridge Saws**
- **CNC Routers**
- **Edge Polishers**

Features:

This product does not contain muriatic, sulfuric, phosphoric, hydrofluoric or hydrochloric acids. Because of its less corrosive nature, this product can be used on most metals, painted and plastic surfaces without any concern of etching or damage.

Directions:

- Apply Slurry Solve with a low pressure foaming garden sprayer
- Allow 15-30 dwell time for maximum penetration
- Reapply if surface becomes dry. Keep surface wet during cleaning
- When surface begins blister or pinhole, scrape to confirm softness of residue
- Hose down the surface or use a rag to remove residue
- Reapply and repeat for heavy build up. Approximately 1/8"-1/4" removed each time.

CONTAINS: Filtered water, coconut based cleaning agent, natural alkalinity builder, whole and natural plant essences.

Keep out of reach of children. For industrial use only. Read SDS for more information.
